

# Traka Integrations

The missing piece of Access Control  
is Asset Control

traka  
ASSA ABLOY

ASSA ABLOY, the global leader  
in door opening solutions

Traka systems are able to integrate with many different types of Access Control environments. Many hundreds of successful installations worldwide provide customers the security, cost and audit benefits of Traka Intelligent Key and Locker management systems integrated with their Access Control platforms. Seamlessly secure your premises and assets by ensuring staff members can't leave the building if they are still in possession of valuable assets or keys. Ensure only authorised users have access to secure areas and any changes made in the access levels on the access control database will automatically transfer into the Traka intelligent key cabinets and locker systems.

Administrators can now enrol users into the Traka database, grant access levels to key cabinets/intelligent lockers and receive Traka alarms back into the access control system for seamless day to day operation.

### Asset Usage Assurance

By leveraging Traka's awareness of direction in combination with door access hardware, your system can be easily be configured to support Asset Usage Assurance. In secured areas of your facility where entry and exit readers are present, the system can be set up so cardholders must return keys and assets to the Traka cabinets before having permission to leave that area.

### Benefits:

- Seamless integration allowing Traka system administration from a familiar access control environment
- Significantly reduces administration overhead and maintains consistent data between Traka and Access control database
- Individual and Group Level updates to the Traka system
- Single credential used for both door access and keys or assets secured in Traka

### Traka currently integrates with:

- AMAG Symmetry
- C-Cure 9000
- Lenel OnGuard
- Nedap AEOS
- Paxton Net2
- ARX
- and many others
